

PEMANGKIN

-  Promote flowering and root development
催花和促进根系生长
-  Increase FFB oil content and higher yield
提升含油量及增加产量
-  Promote lush fronds, while improving problem wrinkled leaves
促使叶子茂盛，同时改善皱叶的问题
-  Contains beneficial microbes to release locked-up nutrients and prevent plant diseases
富含良菌可释放藏在土壤中的养份及预防病害
-  3 in 1 formulation for easy application (labor saving)
全新三合一配方，一次施放节省人工

PEMANGKIN

Phosphorus Deficiency 缺磷

Function of Phosphorus 磷功能

- Promotes root development and growth
特别促进根系发育和健全成长
- Involved in the whole reproductive process of fertilisation, seed set and fruit development
有助于整个生殖过程包括开花, 授粉, 结果等
- Plant effectively uptake available phosphorus by specific functional micro-organisms
植物可有效地吸收有益功能微生物所释放的有效磷

Magnesium Deficiency 缺镁

Function of Magnesium 镁功能

- Central element in chlorophyll and essential for photosynthesis.
叶绿素的重要元素以提高光合作用
- Serves as an activator of many plant enzymes required in growth
是植物内多种酶的激活剂

Boron Deficiency 缺硼

Function of Boron 硼功能

- Essential for germination of pollen grains and growth of pollen tubes
增加授粉及种子生长发育
- Increases the rate of mechanism and transport of sugars
有助于碳水化合物代谢及运输
- Involve in cell wall formation, development, and cell division
完成细胞壁结构, 确保细胞分裂完整
